

Golden Gladiator

FXGladiator.com

Important Features

Platform:

MetaTrader4

Timeframes:

M15, M30, H1, H4, D1

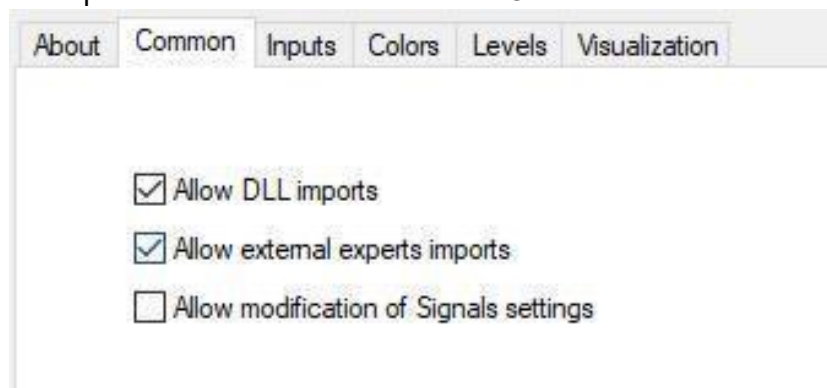

Currency Pairs:

All pairs with XAU

Installation

1. Unzip the file you've downloaded.
2. It contains a single file: **Golden_Gladiator_Indicator.ex4**
3. Open your MT4.
4. Go to "File – Open Data Folder – MQL4".
5. Copy "Golden_Gladiator_Indicator.ex4" from the folder you've downloaded and paste it into the "Indicators" folder in MQL4.
6. Restart the MT4.

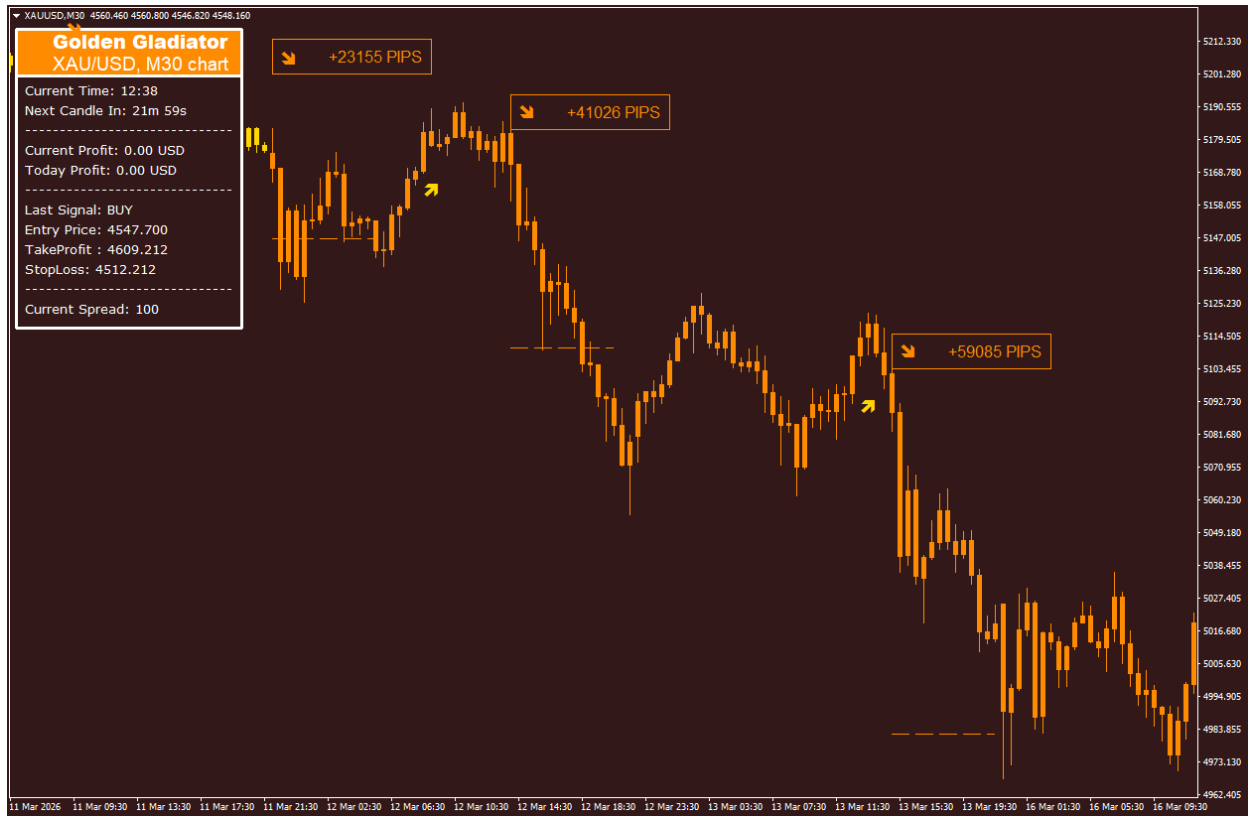

In order to attach the indicator, drag and drop it to the chart of your choice. Then enable the option "Allow DLL imports" as shown below and click OK.

PLEASE MAKE SURE THAT YOU'VE REGISTERED YOUR MT4 NUMBERS, OTHERWISE THE SOFTWARE WILL NOT WORK! Contact us at support@altraforex.com if you require assistance with license activation.

Interface

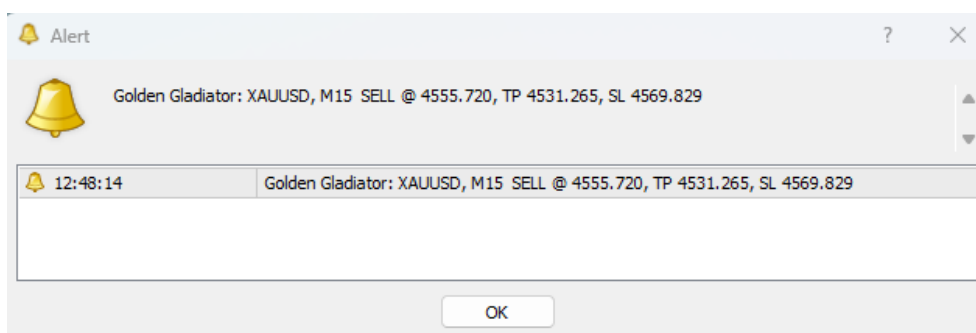

This is how your chart should look after the installation:

Entering and Exiting the Trade

Once your indicator is installed, you need to wait for a new signal to be generated. It may take some time – the higher the timeframe, the longer the possible wait may be. Please make sure to enter the trade only when the new signal generated.

As soon as the NEW signal is generated, you will get signal alert with all the information about the trade. Don't forget to use recommended StopLoss value.

This is how new Buy and Sell signals look on the chart.

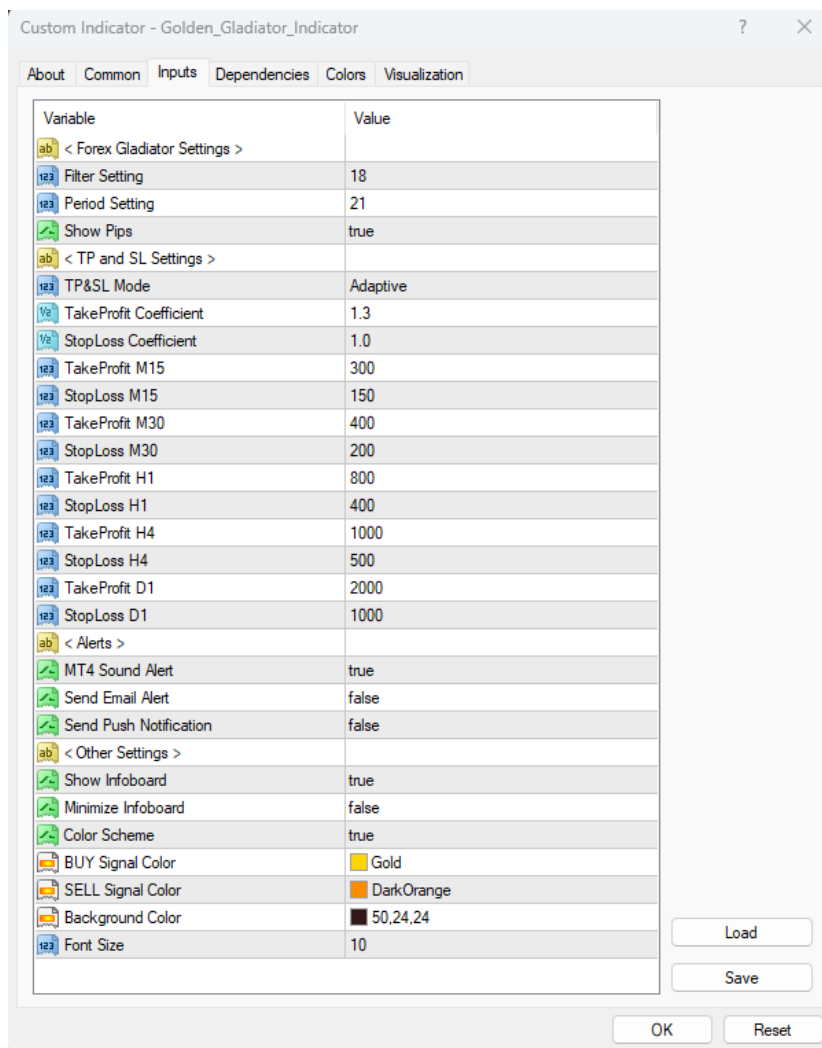

We recommend aiming at exiting the trade at the TakeProfit level. If the chosen TakeProfit level is not reached in the trade, exit the trade when the opposite signal is generated.

Bullish And Bearish Trends

Golden Gladiator has a built-in filter, that shows you the main trend direction. When the candlesticks on the chart become yellow, that means that the trend is bullish – and you should enter BUY trades only, following the signals generated. When the candlesticks on the chart become orange, that means that the trend is bearish – and you should enter SELL trades only, following the signals generated.

Inputs

Filter Setting allows you to change the intensity and frequency of bullish/bearish trend change.

Period Setting allows you to change the intensity and frequency of all the signals generated. Set to 21 by default. If you want to receive signals more often, you can try reducing the value in this field.

Show Pips is responsible for showing the pips value of each TakeProfit level on the chart (displayed in the rectangular frame beside the signal arrow).

< TP and SL Settings >

TP&SL Mode is responsible for TP and SL values: you can choose Adaptive (the software will generate TP and SL values taking into consideration the current market conditions and will be displayed in the Infoboard; you can change the coefficients for the Adaptive Mode below) or Regular (TP and SL values will stay fixed, the values are listed below).

TakeProfit Coefficient and **StopLoss Coefficient** allow the trader to have the ratio set according to his or her trading style and risk management. It is recommended to trade with either the default settings or to slightly increase the coefficients.

TakeProfit M15 allows you to manually configure TakeProfit value on M15 timeframe. Set to 30 pips by default. (Shown in points as 300).

StopLoss M15 allows you to manually configure Stop Loss value on M15 timeframe. Set to 15 pips by default. (Shown in points as 150).

TakeProfit M30 allows you to manually configure TakeProfit value on M30 timeframe. Set to 40 pips by default. (Shown in points as 400).

StopLoss M30 allows you to manually configure Stop Loss value on M30 timeframe. Set to 20 pips by default. (Shown in points as 200).

TakeProfit H1 allows you to manually configure TakeProfit value on H1 timeframe. Set to 80 pips by default. (Shown in points as 800).

StopLoss H1 allows you to manually configure Stop Loss value on H1 timeframe. Set to 40 pips by default. (Shown in points as 400).

TakeProfit H4 allows you to manually configure TakeProfit value on H4 timeframe. Set to 100 pips by default. (Shown in points as 1000).

StopLoss H4 allows you to manually configure Stop Loss value on H4 timeframe. Set to 50 pips by default. (Shown in points as 500).

TakeProfit D1 allows you to manually configure TakeProfit value on D1 timeframe. Set to 200 pips by default. (Shown in points as 2000).

StopLoss D1 allows you to manually configure Stop Loss value on D1 timeframe. Set to 100 pips by default. (Shown in points as 1000).

< Alerts Settings >

MT4 Sound Alert is responsible for displaying pop-up alert.

Send Email Alert is responsible for sending the email to your inbox as soon as the signal is generated.

Send Push Notification is responsible for sending push notification to your phone as soon as the signal is generated.

< Other Settings >

Show Infoboard is responsible for displaying the Infoboard on the chart.

Minimize Infoboard allows the user to leave only the header of the Infoboard on the chart.

Color scheme is responsible for showing the background of the chart and the candle bars in specific Golden Gladiator colors. In order to return to default MT4 colors, switch this field to "false"

Buy Signal Color, Sell Signal Color and **Background Color** are responsible for the colors of the interface elements on the chart.

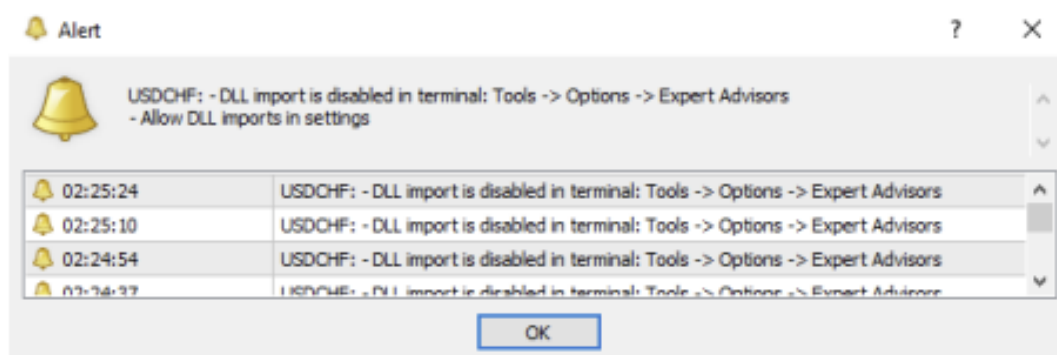

Font Size is responsible for depicting the font in the Infoboard. If your Infoboard is illegible, please try either changing the screen resolution of your PC or decreasing Font Size value.

If your Golden Gladiator is not working...

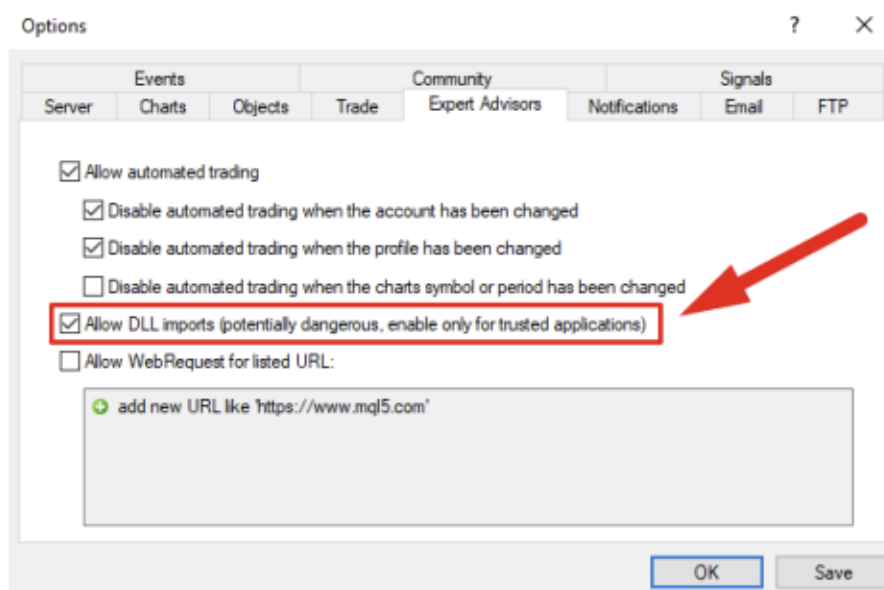

If you think that your software is not functioning properly, there are several possible reasons for that.

1. Please make sure you've unpacked the zip archive with the installation package and installed it into the right folder (**Golden_Gladiator_Indicator.ex4** goes into the **"Indicators"** folder, not the "Experts" folder).

2. If you are getting the message "DLL import is disabled" like this:

Then please follow the instructions from the alert, go Tools - Options - Expert Advisors and allow DLL there:

3. If your chart is blank, it is possible that there has been some issue with the activation. Please contact us at support@altraforex.com or via a Telegram @olivermurphy and we will do our best to try and help you as soon as possible.

Setting Push Notifications

1. Download MetaTrader 4 application from AppStore or Google Play to your phone.
2. Go to “Settings – New Account – Login to an existing account”.
3. Choose your broker and sign in using your login and password from PC version of MT4.
4. Go to “Settings – Chat and Messages”. At the bottom of the screen you will find your MetaQuotes ID.
5. Open MT4 on your PC. Go to “Tools – Options – Notifications” and enter your ID from your phone to MetaQuotes ID field.
6. Don't forget to click on “Send Notification” in the Indicator inputs and choose “true” every time you attach the indicator to a chart.

Setting Email Notifications

1. Open MT4 on your PC. Go to “Tools – Options – Email” and click “Enable”.
2. Enter your SMTP server (you can use search engine to learn which one is correct for your email provider).
3. Enter your email address in the fields “SMTP login”, “From” and “To”
4. Enter your email password in the “SMTP password” field.
5. Don't forget to click on “Send Mail” in the Indicator inputs and choose “true” every time you attach the indicator to a chart.
