

Forex Pharaon

ForexPharaon.com

Important Features

Platform:

MetaTrader5

Timeframes:

M15, M30, H1, H4, D1

Currency Pairs:

All currency pairs

Metals

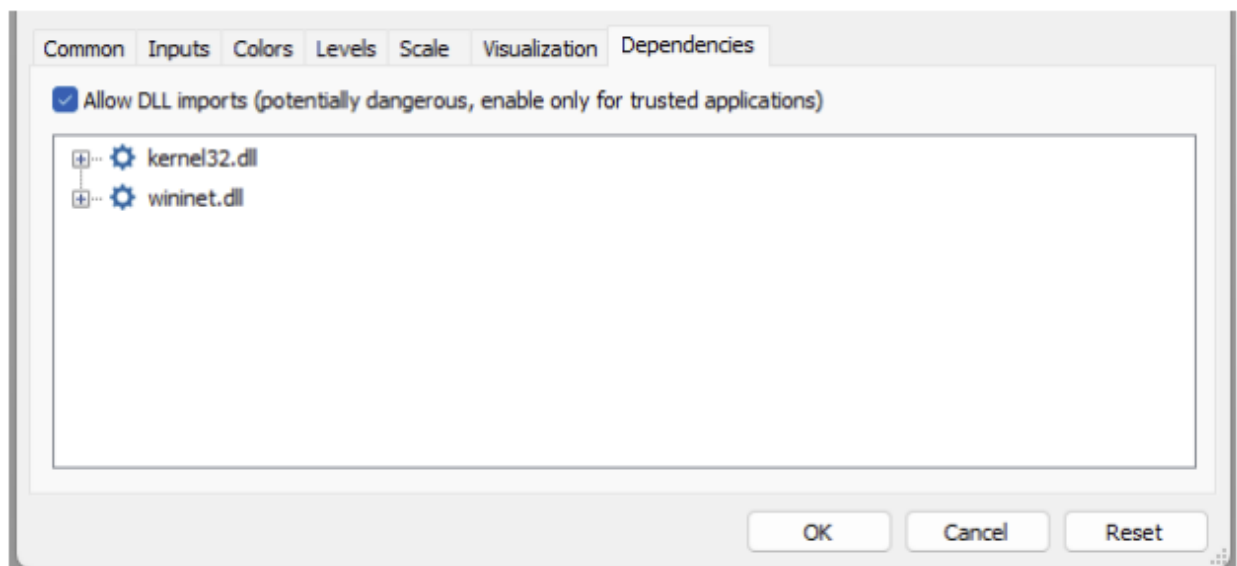

Indices

Crypto

Installation

1. Unzip the file you've downloaded.
2. It contains a single file: **Forex_Pharaon_Indicator.ex5**
3. Open your NT5.
4. Go to "File – Open Data Folder – MQL5".
5. Copy "Forex_Pharaon_Indicator.ex5" from the folder you've downloaded and paste it into the "Indicators" folder in MQL5.
6. Restart the NT5.

In order to attach the indicator, drag and drop it to the chart of your choice. Then enable option "Allow DLL imports" as shown below and click OK.

PLEASE MAKE SURE THAT YOU'VE REGISTERED YOUR NT5 NUMBERS, OTHERWISE THE SOFTWARE WILL NOT WORK! Contact us at support@altraforex.com if you require assistance with license activation.

Interface

This is how your chart should look like after the installation:

Please note: if you feel that your MetaTrader is slowing down when you load the software on the chart, try disabling the color scheme of the chart in the Inputs (choose *“false”* for **Color scheme**).

Recommended Pairs

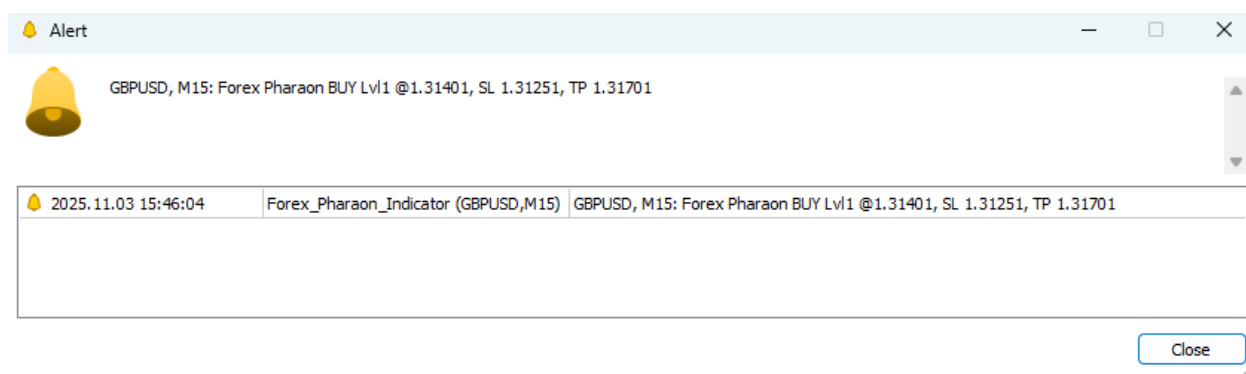

In order to see the best performance possible from Eagle Scalper, we recommend using these pairs:

- EUR/USD
- GBP/USD
- AUD/USD
- GBP/AUD
- GBP/JPY
- USD/JPY
- EUR/AUD
- EUR/JPY

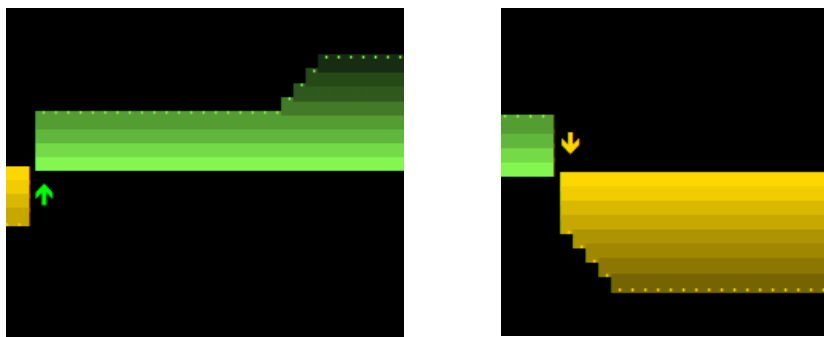

Entering and Exiting the Trade

Once your indicator is installed, you need to wait for a new signal to be generated. It may take some time – the higher the timeframe, the longer the possible wait may be. Please make sure to enter the trade only when the new signal generated.

As soon as the NEW signal is generated, you will get signal alert with all the information about the trade. Don't forget to use recommended StopLoss value.

This is how new Buy and Sell signals look on the chart.

Forex Pharaon has special feature – its Confirmation levels. Please read more about them in the next chapter of this user guide.

We recommend aiming at exiting the trade at the Opposite signal. If you choose to exit at the TakeProfit level and the chosenTakeProfit level is not reached in the trade, exit the trade when the opposite signal is generated.

Two Confirmation Levels

Forex Pharaon has special feature – its Confirmation levels. You choose which trades to enter:

- you can enter the trades when the 1st Level is generated;
- or you can wait and enter only when the 2nd level is generated.

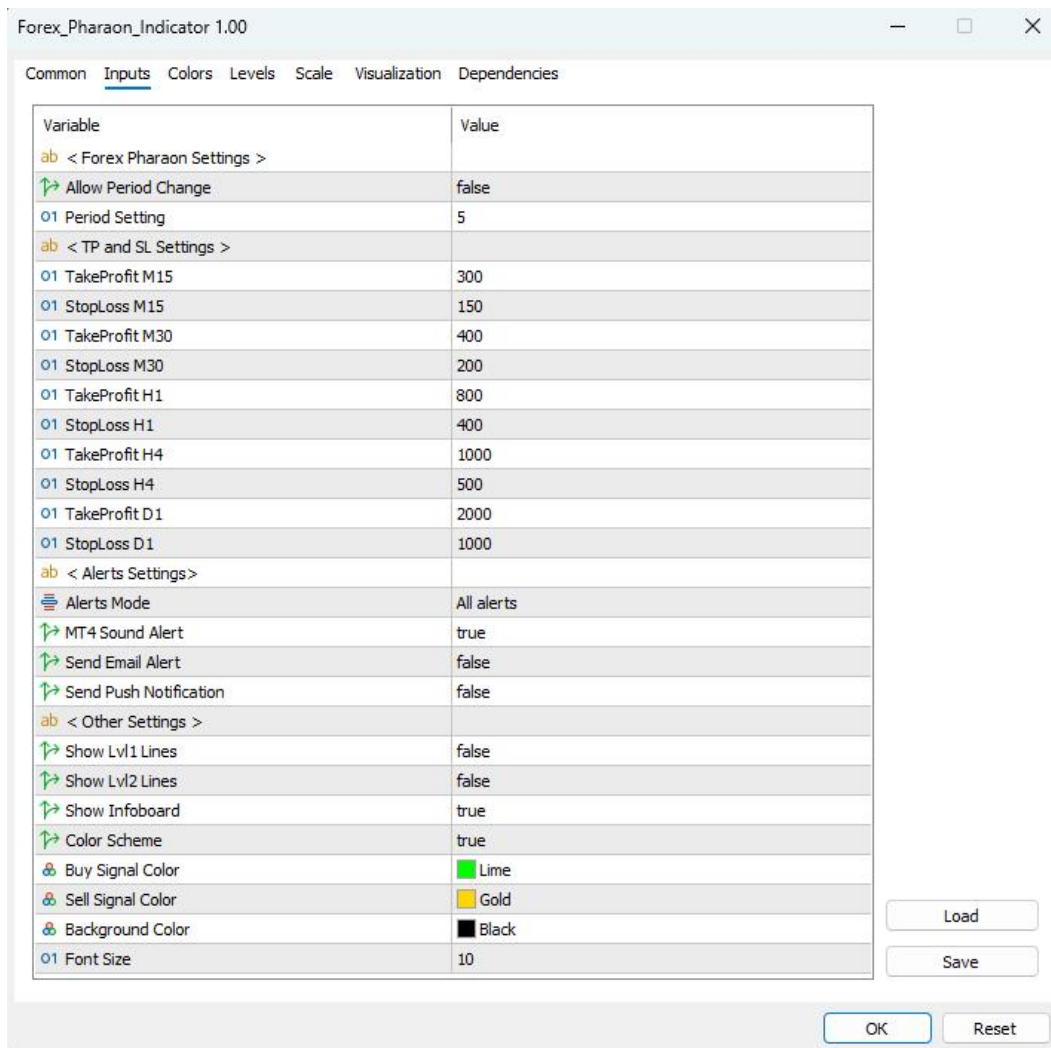

The same works for the exit:

- you can exit trades as soon as any opposite level is generated, including the 1st Level signals;
- or you can ignore the 1st level signals and exit only the trades with the 2nd Level Confirmation.

Inputs

Allow Period Change allows enabling the changes put into the Period Setting field.

Period Setting allows you to change the intensity and frequency of the signals generated. Set to 5 by default. If you want to receive signals more often, you can try reducing the value in this field. **PLEASE NOTE** that the changes will take effect only if **Allow Period Change** is set to "true".

< TP and SL Settings >

TakeProfit M15 allows you to manually configure TakeProfit value on M1 timeframe. Set to 30 pips by default. (Shown in points as 300).

StopLoss M15 allows you to manually configure Stop Loss value on M1 timeframe. Set to 15 pips by default. (Shown in points as 150).

< Alerts Settings >

Alerts Mode is responsible for choosing whether to show only main new Buy/Sell generated (**BUY/SELL only**) or to show both main signals and extra signals generated (**All alerts**).

NT5 Sound Alert is responsible for displaying pop-up alert.

Send Email Alert is responsible for sending the email to your inbox as soon as the signal is generated.

Send Push Notification is responsible for sending push notification to your phone as soon as the signal is generated.

< Other Settings >

Show Lvl1 Lines and **Show Lvl2 Lines** are responsible for displaying the vertical dashed lines from the oscillator onto the chart.

Show Infoboard is responsible for displaying the Infoboard on the chart.

Color scheme is responsible for showing the background of the chart and the candle bars in specific Forex Pharaon colors. In order to return to default NT5 colors, switch this field to "false"

Buy Signal Color, Sell Signal Color, Extra Signal Color and **Background Color** are responsible for the colors of the interface elements on the chart.

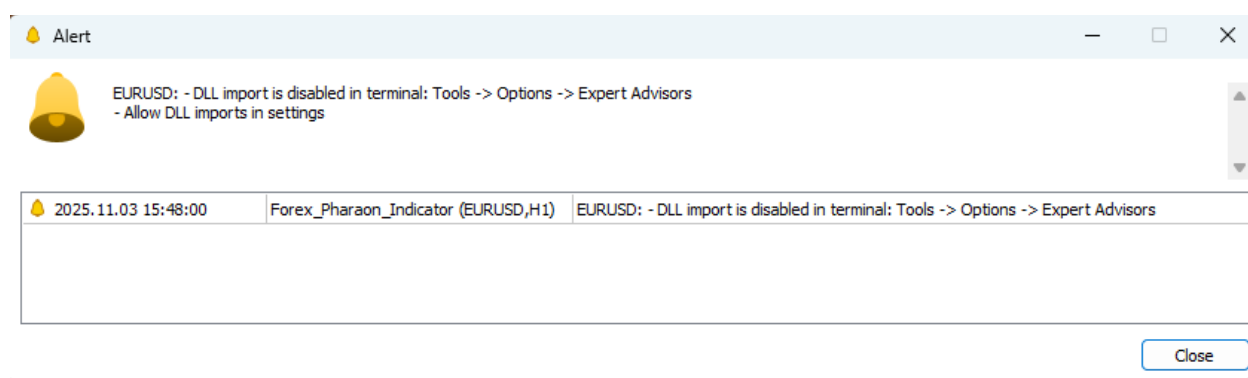

Font Size is responsible for depicting the font in the Infoboard. If your Infoboard is illegible, please try either changing the screen resolution of your PC or decreasing Font Size value.

If your Forex Pharaon is not working...

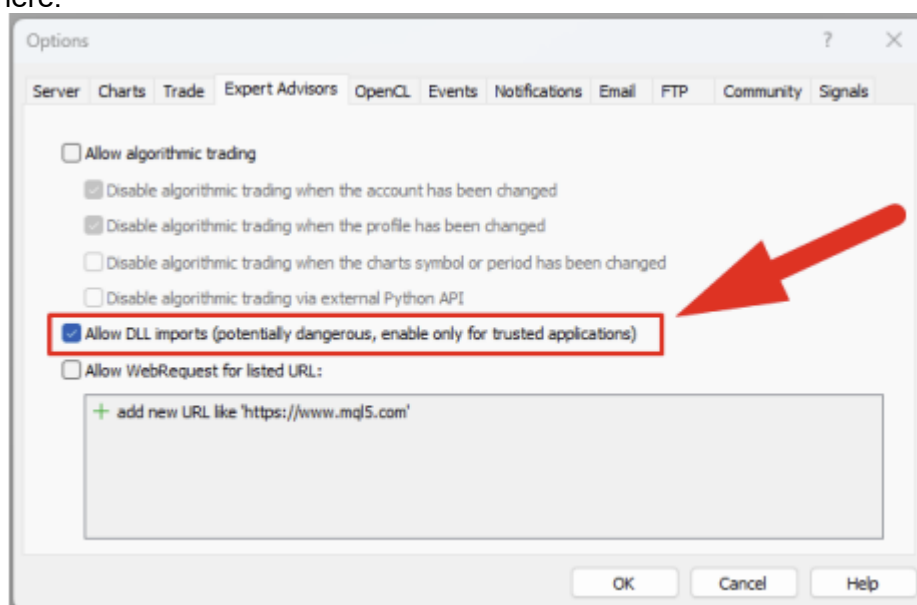

If you think that your software is not functioning properly, there are several possible reasons for that.

1. Please make sure you've unpacked the zip archive with the installation package and installed it into the right folder (**Forex_Pharaon_Indicator.ex5** goes into the “**Indicators**” folder, not the “**Experts**” folder).

2. If you are getting the message “DLL import is disabled” like this:

Then please follow the instructions from the alert, go Tools - Options - Expert Advisors and allow DLL there:

3. If your chart is blank, it is possible that there has been some issue with the activation. Please contact us at support@altraforex.com or via a Telegram [@olivermurphy](https://www.instagram.com/olivermurphy) and we will do our best to try and help you as soon as possible.

Setting Push Notifications

1. Download MetaTrader 5 application from AppStore or Google Play to your phone.
2. Go to “Settings – New Account – Login to an existing account”.
3. Choose your broker and sign in using your login and password from PC version of NT5.
4. Go to “Settings – Chat and Messages”. At the bottom of the screen you will find your MetaQuotes ID.
5. Open MT5 on your PC. Go to “Tools – Options – Notifications” and enter your ID from your phone to MetaQuotes ID field.
6. Don't forget to click on “Send Notification” in the Indicator inputs and choose “true” every time you attach the indicator to a chart.

Setting Email Notifications

1. Open NT5 on your PC. Go to “Tools – Options – Email” and click “Enable”.
2. Enter your SMTP server (you can use search engine to learn which one is correct for your email provider).
3. Enter your email address in the fields “SMTP login”, “From” and “To”
4. Enter your email password in the “SMTP password” field.
5. Don't forget to click on “Send Mail” in the Indicator inputs and choose “true” every time you attach the indicator to a chart.
